Regards, Hiring Manager

May 24, 2024

I'm writing to IBM to express interest in the position of Java Developer. Currently, I'm computer engineering student with experience in Kotlin and Java. I am really excited about this chance to play a skilled role in IBM's brilliant team.

At Lusófona University, where I am pursuing a Bachelor of Computer Engineering, I have developed a solid foundation in system design, software development, and algorithms. I've been up to date with a variety of programming languages I learned through my courses and actively worked on projects using Kotlin and Java.

I have worked with other people on Java-based projects during my academic career from developing web apps and implementing a variety of data structures, to taking my code to the next level. I also worked with Kotlin, and I find its code syntax very clear and satisfying. I know I can trust in my abilities and I that I'm capable to take on challenging problems and provide excellent results.

As a leader in technology, IBM's style is simply what I wish for in a profession. I find its activities related to commercial solutions, cloud computing, and artificial intelligence to be quite interesting. It would be really pleasant to share my knowledge and get a nice amount of tips from IBM's talented members.

I share IBM's dedication to innovation, diversity, and lifelong learning. I think my adaptability, ability for solving problems, and enthusiasm for coding make me a valuable addition to your team. The idea of being able to contribute to IBM's innovative projects motivates me.

I appreciate you taking the time to review my application. My resume has been sent and it has further details about my qualifications. I would be happy to talk about how I can help IBM succeed even more. You can reach me at tomaspica24@gmail.com or 936 421 957.

Sincerely,

Tomás Pica
